

## Sprint report until checkpoint 2: group 18

### **Sprint 1: Week 5**

Goals: Making a group agreement, getting started working as a group, starting to plan out some features and the design, deploying front end.

Lars wrote the group agreement that everyone approved of, we started to discuss and plan out features for our website and design properties. We made a group repository and deployed our front end through Netlify.

Accomplishment: We finished all the goals we set before the sprint.

### **Sprint 2: Week 7**

Goal: Get everything ready for checkpoint 2; use case, database model, wireframe, HTML skeleton and design guideline.

We discussed what needed to get done in the meetings and distributed the tasks between each of the team members. After we had done our part, we presented it to the group for feedback, and made any changes based on that.

- Use case: Veronika
- Database model: Aironas
- Design guideline: Everyone
- HTML skeleton: Lars
- Wireframe: Veronika made the main page, and William did the rest of the pages

Accomplishment: We did finish most of our goal of getting things ready for C2, except for the design guideline which was not finished and needs more refinement.
