

Sprint report after C2 – group 18

Sprint 1: Week 10

Goals: during this week we wanted to get the front end of the application finished so that we could show this to the teacher and/or student assistants to be get feedback on potential improvements.

Accomplishment: We did not manage to finish the entire front end part of the application, we did manage to get a rough design of how all the different pages on the website should look, but there are some javascript functions and some details that still needed to be improved on the website.

Sprint 2: week 11

Goals: This week the focus was on completing the entire website, adding the intended javascript functions and making the front end fully functional (except for the database and back end parts)

Accomplishment: This week we met the intended goal with finishing all the different pages and the intended functions, we used a few hours this week total on this project as the group did not all have the time to meet at the scheduled days due to important errands.

Sprint 3: week 12

Goals: this week the group wanted to start connecting the back end to the front end, for example with log in and create user functions.

Accomplishment: The group had already worked with back end in the past weeks but in this week the group managed to connect the front end and back end to each other, but there was a learning curve and the group had to use time developing certain skills. We met the goal but there are certain bugs that we have to figure out with the login system.

Sprint 4: week 14 (vacation week 13)

Sprint 5: week 15:

Goals: This week the group wanted to get a smoother connection between the back end and front end. The group wanted to start finishing the project in some way due to other exams that need attention.

Accomplishment: This week the group did not meet the intended goal, there were some complications with the back end/server and time went to other subject, we did however divide certain tasks and jobs throughout the group to solve some issues.
